

X-SERIES

MULTI-STAGE FILTRATION SYSTEM

WWW.EVERFILT.COM

X-Series Multi-Stage Filtration System *(multiple medias & independent backwash)*

The Everfilt® X-Series is a groundbreaking multi-stage filtration system that combines three filtration stages into one compact unit. The X-Series is ideal for tight spaces and complex water filtration needs. It features *independent backwash* to prevent contamination and maintain media quality, and isolation valves on each tank for maintenance without downtime. **Customizable sizes and configurations are available to match specific requirements and aesthetic preferences.**

Each X-Series tank has 304SS removable wedge wire underdrains (no PVC or false bottom design), for years of continued use. The tank exterior has an industrial-grade fuze coat gloss finish and **NSF61-Approved** interior coating for superior protection.

MEDIA: GAC / MULTI-MEDIA / DMI-65® / GREENSAND PLUS™

The Multi-Stage Process *(how it all works)*

- ▶ **STAGE ONE:** Multi-Media filtration vessel filters down to **5 microns**.
- ▶ **STAGE TWO:** Choice of Greensand Plus™ or DMI-65® media for treating iron, manganese, and arsenic up to **25 ppm**, when paired with the Everfilt® CI-Series Chemical Injection Skid.
- ▶ **STAGE THREE:** 60" of Granular Activated Carbon (GAC) removes chlorine residuals.

Protect **Productivity** and **Profits**
with an Everfilt® Filtration System.

Everfilt® manufactures complete systems and individual components to meet your demands. Providing solutions that deliver cost-effective alternatives, along with custom replacement options!

We Offer **Solutions**
For Many Industries.
